

DTT Sprint 3 ▾

Story Points ▾

ACTIVE

- All tasks were finished near the end of the sprint, so as a result the guideline and remaining values don't match.
- There were some tasks that have been pushed to the next sprint due to the fact that we were unable to solve some issues regarding the job fair feature as well as the elevator pitch video API, so we plan on completing those stories in the next sprint
- Specifically, getting the video streaming to work with GridFS has caused the issues with DTT-84
- As a result, the burndown chart graph for the remaining values does not reach zero
- There was also a slight increase in the burndown chart due to the addition of a task (DTT-76) which was responsible for making the frontend view look more uniform and consistent
